Leading innovation expert Alec Ross explains what's next for the world, mapping out the advances and stumbling blocks that will emerge in the next ten years—for businesses, governments, and the global community—and how we can navigate them. While Alec Ross was working as Hillary Clinton's Senior Advisor on Innovation, he traveled to forty-one countries. He visited some of the toughest places in the world—from refugee camps of Congo to Syrian war zones. From phone-charger stands in Rwanda to R&D labs in South Korea, Ross has seen what the future holds. Over the past two decades, the Internet has radically changed markets and businesses worldwide. InThe Industries of the Future, Ross shows us what's next, highlighting the best opportunities for progress and explaining why countries thrive or sputter. He examines the specific fields that will most shape our economic future over the next ten years, including cybercrime and cybersecurity, the commercialization of genomics, the next step for big data, and the coming impact of digital technology on money, payments, and markets. And in each of these realms, Ross addresses the toughest questions: How will we have to adapt to the changing nature of work? Is the prospect of cyberwar sparking the next arms race? How can the world's rising nations hope to match Silicon Valley in creating their own innovation hotspots? Ross blends storytelling and economic analysis to give a vivid and informed perspective on how sweeping global trends are affecting the ways we live, incorporating the insights of leaders ranging from the founders of Google and Twitter to defense experts like David Petraeus. The Industries of the Future takes the intimidating, complex topics that many of us know to be important and boils them down into clear, plain-spoken language. This is an essential work for understanding how the world works—now and tomorrow—and a must-read for businesspeople, in every sector, from every country.

In the face of unprecedented global change, New York Times bestselling author Alec Ross proposes a new social contract to restore the balance of power between government, citizens, and business. For 150 years, there has been a contract. Companies hold the power to shape our daily lives. The state holds the power to make them fall in line. And the people hold the power to choose their leaders. But now, this balance has shaken loose. As the market consolidates, the lines between big business and the halls of Congress have become razor-thin. Private companies have become as powerful as countries. As Walter Isaacson said about Alec Ross's first book, The Industries of the Future, "The future is already hitting us, and Ross shows how it can be exciting rather than frightening." Through interviews with the world's most influential thinkers and stories of corporate activism and malfeasance, government failure and renewal, and innovative economic and political models, Ross proposes a new social contract—one that resets the equilibrium between corporations, the governing, and the governed.

The New York Times bestseller, from leading innovation expert Alec Ross, a "fascinating vision" (Forbes) of what's next for the world and how to navigate the changes the future will bring. While Alec Ross was working as Senior Advisor for Innovation to the Secretary of State, he traveled to forty-one countries, exploring the latest advances coming out of every continent. From startup hubs in Kenya to R&D labs in South Korea, Ross has seen what the future holds. In The Industries of the Future, Ross provides a "lucid and informed guide" (Financial Times) to the changes coming in the next ten years. He examines the fields that will most shape our economic future, including robotics and artificial intelligence, cybercrime and cybersecurity, the commercialization of genomics, the next step for big data, and the impact of digital technology on money and markets. In each of these realms, Ross addresses the toughest questions: How will we have to adapt to the changing nature of work? Is the prospect of cyberwar sparking the next arms race? How can the world's rising nations hope to match Silicon Valley with their own innovation hotspots? And what can today's parents do to prepare their children for tomorrow? Ross blends storytelling and economic analysis to show how sweeping global trends are affecting the ways we live. Sharing insights from global leaders—from the founders of Google and Twitter to defense experts like David Petraeus—Ross reveals the technologies and industries that will drive the next stage of globalization. The Industries of the Future is "a riveting and mind-bending book" (New York Journal of Books), a "must read" (Wendy Kopp, Founder of Teach for America) regardless of "whether you follow these fields closely or you still think of Honda as a car rather than a robotics company" (Forbes).

The Industries of the Future by Alec Ross | Summary & Analysis Preview: The Industries of sthe Future provides an insider's perspective on emerging digital industries. Many of these emerging technologies, including robotics, genomics, the codification of money into currencies such as Bitcoin, and the development of Big Data analytics, were once considered science fiction. These technological changes build upon the proliferation of personal computers and telecommunications technology in the late twentieth century. Many of these changes, such as enhanced robotics, will begin altering American lifestyles by the end of the next decade. The economic potential of these industries is such that genomics alone is projected to grow to become an industry that rivals the internet in terms of economic impact. The industries of the future will also present new and unique challenges for cybersecurity… PLEASE NOTE: This is key takeaways and analysis of the book and NOT the original book. From 2020 Democratic presidential candidate Andrew Yang, a captivating account of how "a skinny Asian kid from upstate" became a successful entrepreneur, only to find a new mission: calling attention to the urgent steps America must take, including Universal Basic Income, to stabilize our economy amid rapid technological change and automation. The shift toward automation is about to create a tsunami of unemployment. Not in the distant future--now. One recent estimate predicts 45 million American workers will lose their jobs within the next twelve years--jobs that won't be replaced. In a future marked by restlessness and chronic unemployment, what will happen to American society? In The War on Normal People, Andrew Yang paints a dire portrait of the American economy. Rapidly advancing technologies like artificial intelligence, robotics and automation software are making millions of Americans' livelihoods irrelevant. The consequences of these trends are already being felt across our communities in the form of political unrest, drug use, and other social ills. The future looks dire-but is it unavoidable? In The War on Normal People, Yang imagines a different future--one in which having a job is distinct from the capacity to prosper and seek fulfillment. At this vision's core is Universal Basic Income, the concept of providing all citizens with a guaranteed income-and one that is rapidly gaining popularity among forward-thinking politicians and economists. Yang proposes that UBI is an essential step toward a new, more durable kind of economy, one he calls "human capitalism."

"A quintessential work of technological futurism." – James Surowiecki, strategy + business, "Best Business Books 2017 – Innovation" From one of our leading technology thinkers and writers, a guide through the twelve technological imperatives that will shape the next thirty years and transform our lives Much of what will happen in the next thirty years is inevitable, driven by technological trends that are already in motion. In this fascinating, provocative new book, Kevin Kelly provides an optimistic road map for the future, showing how the coming changes in our lives—from virtual reality in the home to an on-demand economy to artificial intelligence embedded in everything we manufacture—can be understood as the result of a few long-term, accelerating forces. Kelly both describes these deep trends—interacting, cognifying, flowing, screening, accessing, sharing, filtering, remixing, tracking, and questioning—and demonstrates how they overlap and are codependent on one another. These

larger forces will completely revolutionize the way we buy, work, learn, and communicate with each other. By understanding and embracing them, says Kelly, it will be easier for us to remain on top of the coming wave of changes and to arrange our day-to-day relationships with technology in ways that bring forth maximum benefits. Kelly's bright, hopeful book will be indispensable to anyone who seeks guidance on where their business, industry, or life is heading—what to invent, where to work, in what to invest, how to better reach customers, and what to begin to put into place—as this new world emerges.

Have a startup idea? Want to launch it fast? People often spend years on working on startup ideas that fail—and they could have known long before, had they asked the hard questions earlier. Five-time tech founder Dave Parker has been there, and in Trajectory: Startup he offers a path to get you from ideation to launch and revenue in just six months. With a track record of starting companies from scratch, raising both angel and venture capital, and participating in eight exits as founder, operator, and board member, Parker's experience is practical and actionable. Having sold three of his own startups and closed two, Parker learned just as much from his failures as from his successes, and he brings this wit and wisdom into his writing in a transparent way. Parker shares advice on: • What makes a good idea that makes money • Recruiting and working with cofounders • Asking customers what product they want (customer development) • How to build a tech product even as a non-tech founder • How to get out of your head, ship a product, and make your first sale Trajectory: Startup removes the mystery from the startup process and outlines a roadmap of tasks and timeframes, with monthly milestones and resources. This pre-accelerator program will help you get the momentum you need. Skip the Executive MBA and go make money! This guide makes starting a company accessible to a broad range of founders, investors, and employees who have the spark of innovation and drive to follow their dreams.
