Armi, acciaio e malattie. Breve storia degli ultimi tredicimila anni è un saggio di Jared Diamond. Edito nel 1997, è stato tradotto in italiano da Luigi Civalleri per conto di Einaudi. Il libro è incentrato sulla ricerca di una risposta alla domanda che Yali, un abitante della Nuova Guinea, fece all'autore nel luglio del 1972: "Come mai voi bianchi avete tutto questo cargo e lo portate qui in Nuova Guinea, mentre noi neri ne abbiamo così poco?", dove per Cargo si intendono tutti quei ...

Armi, Acciaio e Malattie era in attesa di lettura già da un po' di tempo, e visto che avevo trascorso il periodo di #lockdown per svuotare la cesta dei libri, specie i vecchi Urania, lasciando da parte testi presi più di recente, ho pensato di dedicare parte del mio tempo alla sua lettura durante le ferie estive.

A "riveting and illuminating" Bill Gates Summer Reading pick  
about how and why some nations recover from trauma and  
others don't (Yuval Noah Harari), by the Pulitzer Prize-  
winning author of the landmark bestseller Guns, Germs, and  
Steel. In his international bestsellers Guns, Germs and Steel  
and Collapse, Jared Diamond transformed our understanding  
of what makes civilizations rise and fall. Now, in his third book  
in this monumental trilogy, he reveals how successful nations

recover from crises while adopting selective changes -- a coping mechanism more commonly associated with individuals recovering from personal crises. Diamond compares how six countries have survived recent upheavals -- ranging from the forced opening of Japan by U.S. Commodore Perry's fleet, to the Soviet Union's attack on Finland, to a murderous coup or countercoup in Chile and Indonesia, to the transformations of Germany and Austria after World War Two. Because Diamond has lived and spoken the language in five of these six countries, he can present gut-wrenching histories experienced firsthand. These nations coped, to varying degrees, through mechanisms such as acknowledgment of responsibility, painfully honest self-appraisal, and learning from models of other nations. Looking to the future, Diamond examines whether the United States, Japan, and the whole world are successfully coping with the grave crises they currently face. Can we learn from lessons of the past? Adding a psychological dimension to the in-depth history, geography, biology, and anthropology that mark all of Diamond's books, *Upheaval* reveals factors influencing how both whole nations and individual people can respond to big challenges. The result is a book epic in scope, but also his most personal yet.

From the author of *Guns, Germs and Steel*, Jared Diamond's *Collapse: How Societies Choose to Fail or Survive* is a visionary study of the mysterious downfall of past civilizations. Now in a revised edition with a new afterword, Jared Diamond's *Collapse* uncovers the secret behind why some societies flourish, while others founder - and what this means for our future. What happened to the people who made the forlorn long-abandoned statues of Easter Island? What happened to the architects of the crumbling Maya pyramids? Will we go the same way, our skyscrapers one day standing

derelict and overgrown like the temples at Angkor Wat? Bringing together new evidence from a startling range of sources and piecing together the myriad influences, from climate to culture, that make societies self-destruct, Jared Diamond's Collapse also shows how - unlike our ancestors - we can benefit from our knowledge of the past and learn to be survivors. 'A grand sweep from a master storyteller of the human race' - Daily Mail 'Riveting, superb, terrifying' - Observer 'Gripping ... the book fulfils its huge ambition, and Diamond is the only man who could have written it' - Economist 'This book shines like all Diamond's work' - Sunday Times

The aim of this work is to provide a preliminary analysis of a much more far-reaching investigation into the relationship between technology and philosophy. In the context of the contemporary German thought, the author compares the different positions of Karl Marx, Martin Heidegger, Ernst and Friedrich Jünger, Arnold Gehlen and Gunther Anders. The term "machine" is used precisely to mean that complex material device assembled in the last quarter of the 18th century as a result of the definitive modern refinement of certain fundamental technologies, i.e. metallurgy, precision mechanics and hydraulics. The "machine" discussed here arrived on the scene of man's history when the processes of spinning and weaving were entrusted to semi-automatic means; when the water wheels used in mills, hitherto always made of wood, were supplanted by the metal levers of the steam engine; and especially when the steam engine was connected to the weaving frames, to the metalworking hammers, and to other machines used to manufacture other machines in an endless reiteration of assemblies and applications, the enormous outcome of which is what subsequently came to be described as "mass production".

The philosophers discussed here were also dealing with the type of machine described above and in their works we can identify three model images of this idea of machine. These images have been drawn on at various times, also outside the realms of philosophy, and they still provide the backdrop for our knowledge of the machine, which has circulated in a great variety of languages.

Inspired by Marcelo Dascal's theory of controversies, this volume includes studies in the theory of controversies, studies of the history of controversy forms and their evolution, and case-studies of particular historical and current controversies. The purpose of this volume is to identify a taxonomy of controversies and also to sense a line of development for the phenomenon of controversies itself. At the same time, we want to ask ourselves about the impact and the spread of controversies in the contemporary world, eminently intended as a heuristic element facilitating knowledge. For all these reasons, the fundamental aim of the volume is to provide the reader with a selection of current theoretical and practical perspectives on controversies, and to offer a broad picture of the complex range of definitions, meanings and practices connected to them.

The book is composed of several articles that explore complexity in its most varied aspects. The solution of contemporary problems, whatever they may be, requires a multifaceted vision, far beyond the reductionist perspective. The study of complex systems, however, does not have the capacity to offer ready answers to the challenges of humanity. On the contrary, it points to the increase in uncertainty, the need to control variables, and uncertainty. This does not mean, therefore, that we should simply ignore the social, economic, and political phenomena that are all

around us. What this book demonstrates is the importance of knowledge being disseminated, and it is imperative that different sciences exchange ideas, theories, and breakthroughs.

Environment, Social Justice, and the Media in the Age of Anthropocene addresses three imminent challenges to human society in the age of the Anthropocene. The first challenge involves the survival of the species; the second the breakdown of social justice; and the third the inability of the media to provide global audiences with an adequate orientation about these issues. The notion of the Anthropocene as a geological age shaped by human intervention implies a new understanding of the human context that influences the physical and biological sciences. Human existence continues to be affected by the physical and biological reality from which it evolved but, in turn, it affects that reality as well. This work addresses this paradox by bringing together the contributions of researchers from very different disciplines in conversation about the complex relationships between the physical/biological world and the human world to offer different perspectives and solutions in establishing social and environmental justice in the age of the Anthropocene.

Italians love to talk about food. The aroma of a simmering ragú, the bouquet of a local wine, the remembrance of a past meal: Italians discuss these details as naturally as we talk about politics or sports, and often with the same flared tempers. In *Why Italians Love to Talk About Food*, Elena Kostioukovitch explores the phenomenon that first struck her as a newcomer to Italy: the Italian "culinary code," or way of talking about food. Along the way, she captures the fierce local pride that gives Italian cuisine its remarkable diversity.

To come to know Italian food is to discover the differences of taste, language, and attitude that separate a Sicilian from a Piedmontese or a Venetian from a Sardinian. Try tasting Piedmontese bagna cauda, then a Lombard cassoela, then lamb ala Romana: each is part of a unique culinary tradition. In this learned, charming, and entertaining narrative, Kostioukovitch takes us on a journey through one of the world's richest and most adored food cultures. Organized according to region and colorfully designed with illustrations, maps, menus, and glossaries, *Why Italians Love to Talk About Food* will allow any reader to become as versed in the ways of Italian cooking as the most seasoned of chefs. Food lovers, history buffs, and gourmands alike will savor this exceptional celebration of Italy's culinary gifts.
