This book offers insights into the concept that a test can be used to encourage innovation in the classroom.

This book titled Do Case Studies Have a Shelf Life is extremely thought provoking to say the least. The very tenet on which this book is based is innovative and can incite look of debates and deliberations. It is better for anyone to consider this book as an accompaniment to my previously published book on case studies titled How to Write and Teach Case Studies Effectively? as this will give a better idea to anyone not just about case studies but also regarding the basic idea behind this book. It has been phenomenally successful across the globe and i am confident that this book too will get its takers. Those who sincerely think about the well being of case studies as learning product and are evangelists of case based teaching and learning. Apart from discussing about case studies and the way to design them, this book mentions about the elements that contribute to the shelf life of cases. It emphasizes on how to enhance the shelf life of case studies and how can not just the case writers and case development team but the marketing fraternity of cases and the teaching fraternity play a defining role in promoting and enhancing the shelf life of cases. The 'Concluding Thoughts' on this topic hopefully shall invite various supporting and conflicting opinions.

The identification and control of food contaminants rely on careful investigation and implementation of appropriate management strategies. Using a wide range of real-life examples, Case studies in food safety and authenticity provides a vital insight into the practical application of strategies for control and prevention. Part one provides examples of recent outbreak investigations from a wide range of experts around the world, including lessons learnt, before part two goes on to explore examples of how the source was traced and the implications for the food chain. Methods of crisis management are the focus of part three, whilst part four provides studies of farm-level interventions and the tracking of contaminants before they enter the food chain. Part five is focussed on safe food production, and considers the challenges of regulatory testing and certification, hygiene control and predictive microbiology. The book concludes in part six with an examination of issues related to food adulteration and authenticity. With its distinguished editor and international team of expert contributors, Case studies in food safety and authenticity is a key reference work for those involved in food production, including quality control, laboratory and risk managers, food engineers, and anyone involved in researching and teaching food safety. Delivers a vital insight into the practical application of strategies for control and prevention of food contaminants Provides detailed examples of recent outbreak investigations from a wide range of international experts, discussing how the source was traced and the implications for the food chain Chapters discuss methods of crisis management, farm-level interventions, safe food production and the challenges of regulatory testing and certification

Interdisciplinary Education in the Age of Assessment addresses a prevalent need in educational scholarship today. Many current standards-driven curricula follow strict subject-specific guidelines, leaving educators little room for interdisciplinary innovation. This book gears itself toward developing assessment models specific to interdisciplinary education, positioning itself as a seminal volume in the field and a valuable resource to educators across the disciplines. Each chapter covers a major subject area (literacy, science, math, social studies, bilingual education, foreign language, educational policy) and discusses methods of assessing integrated/interdisciplinary curriculum and instruction.
