Acids from HClO₄ to H₂SO₄ are 100% ionized in water . only solvent used in Chem 12 (and most Chemistry) so even though HClO₄ is above HCl on the chart, it is no more acidic in a water solution. H₃₀₊ is the strongest acid that can exist in an undissociated form in water solution. all stronger acids ionize to form H₃₀₊

In this chapter, we will focus on acids and bases and their chemistry. 12.1:

Introduction Certain household chemicals, such as some brands of cleanser, can be very concentrated bases, which makes them among the most potentially hazardous substances found around the home; if spilled on the skin, the strong caustic compound can immediately remove H^+ ions from the flesh, resulting in chemical burns.

Acids are classified as Organic Acids and Mineral Acids. Acids which are derived from plants and animals, they are known as Organic Acids. For Example, Citric Acid from fruit. Mineral acids are inorganic acids such as Sulphuric Acid. They are dangerous to be used, so need more precautions. Acids are also classified as Strong Acids
