It should be noted that Nandini has done B. Tech (Civil Engineering) from the prestigious M S Ramaiya Engineering College, Bangalore. This is also the first time that a topper has emerged from a private engineering college – a tight slap for IITs. Nandini cracked Civil Services Examination in her third attempt in CSE 2015.

Civil Engineering Interview Questions | Interview Questions

Through innovative and expansive research, Oil Revolution analyzes the tensions faced and networks created by anti-colonial oil elites during the age of decolonization following World War II. This new community of elites stretched across Iran, Iraq, Saudi Arabia, Venezuela, Algeria, and Libya. First through their western educations and then in the United Nations, the Arab League, and the Organization of Petroleum Exporting Countries, these elites transformed the global oil industry. Their transnational work began in the early 1950s and culminated in the 1973–4 energy crisis and in the 1974 declaration of a New International Economic Order in the United Nations. Christopher R. W. Dietrich examines how these elites brokered and balanced their ambitions via access to oil, the most important natural resource of the modern era.

Female-to-male transgender people, or transmasculine people as they are called, are just beginning to form their networks in India. But their struggles are not visible to a gender-normative society that barely notices, much less acknowledges, them. While transwomen have gained recognition through the extraordinary efforts of activists and feminists, the brotherhood, as the transmasculine network often refers to itself, remains imponderable, diminished even within the transgender community. For all intents and purposes, they do not exist. In a country in which parents wish their daughters were sons, they exile the daughters who do become sons. In this remarkable, intimate book, Nandini Krishnan burrows deep into the prejudices encountered by India's transmen, the complexities of hormonal transitions and sex reassignment surgery, issues of social and family estrangement, and whether socioeconomic privilege makes a difference. With frank, poignant, often idiosyncratic interviews that braid the personal with the political, the informative with the offhand, she makes a powerful case for inclusivity and a non-binary approach to gender. Above all, she asks the question: what does manhood really mean?

India’s ‘new’ middle classes have gained increasing prominence in media, political, and public imaginings since the liberalization of the economy in the 1990s. As a growing number of Indians living in an extraordinary variety of socio-economic circumstances are identifying as middle class, a concrete definition of this category remains elusive. Within the Limits explores what being ‘middle class’ means to those who identify as such. Set against the backdrop of the south Indian city of Hyderabad, this work highlights the importance of moralized language of respectability and cosmopolitanism in the production of class and gender in India. The book charts how diverse understandings of the moral limits of middle-class being shape consumption patterns, education strategies, attitudes toward caste, shifting marriage ideals, and youth cultures of fashion and dating in the city.

This book provides insights into waste management practices in developing countries, and the application of research and innovation in finding appropriate solutions to improved waste management. The chapters have been selected with a focus on organic waste beneficiation, a significant waste stream in developing countries; the role of government and associated policy interventions; citizen behaviour in support of greater waste recycling; and the safe management of hazardous waste, particularly healthcare risk waste.

Examining the complex linkages between gender and education in the Indian context forms part of a wider matrix of inquiry related to understanding gender and its intersections with class, caste, religion and region. The sixteen essays in this Reader by eminent scholars offer critical feminist perspectives covering many issues related to these linkages, examining ideologies, structural contexts, knowledge, pedagogy and experiences through a socio-historcal lens. They point to the range of sources and methods that can be used to uncover the linkages between gender and education such as quantitative data, literature, autobiographies, oral histories and ethnography. Please note: Taylor & Francis does not sell or distribute the Hardback in India, Pakistan, Nepal, Bhutan, Bangladesh and Sri Lanka.

In today's fast and competitive world, a program's performance is just as important to customers as the features it provides. This practical guide teaches developers performance-tuning principles that enable optimization in C++. You'll learn how to make code that already embodies best practices of C++ design run faster and consume fewer resources on any computer--whether it's a watch, phone, workstation, supercomputer, or globe-spanning network of servers. Author Kurt Guntheroth provides several running examples that demonstrate how to apply these principles incrementally to improve existing code so it meets customer requirements for responsiveness and throughput. The advice in this book will prove itself the first time you hear a colleague exclaim, "Wow, that was fast. Who fixed something?" Locate performance hot spots using the profiler and software timersLearn to perform repeatable experiments to measure performance of code changesOptimize use of dynamically allocated variablesImprove performance of hot loops and functionsSpeed up string handling functionsRecognize efficient algorithms and optimization patternsLearn the strengths--and weaknesses--of C++ container classesView searching and sorting through an optimizer's eyeMake efficient use of C++ streaming I/O functionsUse C++ thread-based concurrency features effectively

The rise of strong nationalist and religious movements in postcolonial and newly democratic countries alarms many Western observers. In The Saffron Wave, Thomas Hansen turns our attention to recent events in the world's largest democracy, India. Here he analyzes Indian receptivity to the right-wing Hindu nationalist party and its political wing, the Bharatiya Janata Party (BJP), which claims to create a polity based on "ancient" Hindu culture. Rather than interpreting Hindu nationalism as a mainly religious phenomenon, or a strictly political movement, Hansen places the BJP within the context of the larger transformations of democratic governance in India. Hansen demonstrates that democratic transformation has enabled such developments as political mobilization among the lower castes and civil protections for religious minorities. Against this backdrop, the Hindu nationalist movement has successfully articulated the anxieties and desires of the large and amorphous Indian middle class. A form of conservative populism, the movement has attracted not only privileged groups fearing encroachment on their dominant positions but also "plebeian" and impoverished groups seeking recognition around a majoritarian rhetoric of cultural pride, order, and national strength. Combining political theory, ethnographic material, and sensitivity to colonial and postcolonial history, The Saffron Wave offers fresh insights into Indian politics and, by focusing on the links between democracy and ethnic majoritarianism, advances our understanding of democracy in the postcolonial world.

It's no secret that certain social groups have predominated India's business and trading history, with business traditionally being the preserve of particular 'Bania' communities. However, the past four or so decades have seen a widening of the social base of Indian capital, such that the social profile of Indian business has expanded beyond recognition, and entrepreneurship and commerce in India are no longer the exclusive bastion of the old mercantile castes. In this meticulously researched book ? acclaimed for being the first social history to document and understand India's new entrepreneurial groups ? Harish Damodaran looks to answer who the new `wealth creators' are, as he traces the transitional entry of India's middle and lower peasant castes into the business world. Combining analytical rigour with journalistic flair, India's New Capitalists is an essential read for anyone seeking to understand the culture and evolution of business in contemporary South Asia.

The aim of this book is to provide research ethics committee members with a resource that focuses on research ethics issues in Africa. The authors are currently active in various aspects of research ethics in Africa and the majority have been trained in the past by either the Fogarty International Center or Europe and Developing Countries Clinical Trial Partnership (EDCTP) sponsored bioethics training programmes .

A timely work describing how localized hospital-based health technology assessment (HB-HTA) complements general, 'arms-length' HTA agency efforts, and what has been the collective global impact of HB-HTA across the globe. While HB-HTA has gained significant momentum over the past few years, expertise in the field, and information on the operation and organization of HB-HTA, has been scattered. This book serves to bring this information together to inform

those who are currently working in the field of HTA at the hospital, regional, national or global level. In addition, this book is intended for decision-makers and policy-makers with a stake in determining the uptake and decommissioning of new and established technologies in the hospital setting. HTA has traditionally been performed at the National/Regional level by HTA Agencies, typically linked to governments. Yet hospitals are the main entry door for most health technologies (HTs). Hospital decision-makers must undertake multiple high stakes investment and disinvestment decisions annually for innovative HTs, usually without adequate information. Despite the existence of arms-length HTA Agencies, inadequate information is available to hospital decision-makers either because relevant HTA reports are not yet released at the time of entry of new technologies to the field, or because even when the report exists, the information contained is insufficient to clarify the contextualized informational needs of hospital decision makers. Therefore, there has recently been a rising trend toward hospital-based HTA units and programs. These units/programs complement the work of National/Regional HTA Agencies by providing the key and relevant evidence needed by hospital decision makers in their specific hospital context, and within required decision-making timelines. The emergence of HB-HTA is creating a comprehensive HTA ecosystem across health care levels, which creates better bridges for knowledge translation through relevance and timeliness.
