Into the fascinating, pungent setting of Blood and Bone Alley, home of leech, barber-surgeon, and apothecary, comes Matilda, raised by a priest to disdain worldly affairs and focus on spiritual matters. To Matilda's dismay, her work will not involve Latin or writing, but practical tasks: lighting the fire, going to market, mixing plasters and poultices, and helping Peg treat patients. She is appalled by the worldliness of her new surroundings, and the sharp-tongued saints she turns to for advice are no help at all. Filled with the witty dialogue and richly authentic detail that Karen Cushman's work is known for, Matilda Bone is a compelling comic novel about a girl who learns to see herself and others clearly, to laugh, and to live contentedly in this world. Author's note.

This book addresses key aspects for the design of contemporary, shallow draught IW vessels for the transport of dry cargo (containers and bulk cargo). Most of the logic that is presented is applicable to the design of river vessels for any river, but the material that is presented is focused on vessels for the River Danube and its tributaries. The term contemporary river vessel assumes that the present-day technology and current Danube river infrastructure are taken into consideration in its design. It is believed that the technologies and concepts that are proposed here are applicable for all new vessel designs for the next 10 to 15 years. Other innovative technologies should be considered for designs beyond that horizon. Moreover, nowadays contemporary IW vessel must be in harmony with the Environmentally Sustainable Transport (EST) policies and hence special attention is paid to both ecology and efficiency. Note however that shipowners and ship operators usually tend to choose the conventional cost-effective transport technologies. Given that potential divergence of interests, the concepts and technologies treated here may be regarded as innovative.

This book offers fascinating insights into the key technical and scientific developments in the history of radar, from the first patent, taken out by Hülsmeyer in 1904, through to the present day. Landmark events are highlighted and fascinating insights provided into the exceptional people who made possible the progress in the field, including the scientists and technologists who worked independently and under strict secrecy in various countries across the world in the 1930s and the big businessmen who played an important role after World War II. The book encourages multiple levels of reading. The author is a leading radar researcher who is ideally placed to offer a technical/scientific perspective as well as a historical one. He has taken care to structure and write the book in such a way as to appeal to both non-specialists and experts. The book is not sponsored by any company or body, either formally or informally, and is therefore entirely unbiased. The text is enriched by approximately three hundred images, most of which are original and have been accessed by detailed searches in the archives.

In an age of uncertainties influenced by information technologies and the networking of societies, the maritime domain remains the main global lane of communication, vital for trade and security. The European Union has become a maritime actor, carrying out counter-piracy and maritime capacity-building operations and actively dealing with maritime safety, fisheries protection, port security, maritime surveillance and counter-immigration at sea. The Union's policies, mechanisms and activities related to the maritime domain are now backed by a Maritime Security Strategy, adopted by the Council in June 2014. This cutting edge book accounts for the trends in maritime strategy and seapower politics as well as the recent developments in the field, both at the conceptual and practical level. It discusses the significance of the maritime domain for European security in general and for the EU in particular. Readers are provided with the necessary tools to critically assess the EU's potential as a global maritime actor and evaluate why Europe's prosperity and security rests on its capacity to shape events at sea.

The Code on Alerts and Indicators 2009, is intended to provide general design guidance and to promote uniformity of type, location and priority for alerts and indicators required by the SOLAS Convention, including relevant performance standards, and by the MARPOL Convention, as well as by other associated instruments and codes. The Code will benefit designers and operators by consolidating in one document the references to priorities, aggregation, grouping, locations and types, including colours and symbols, of shipboard alerts and indicators. This new Code updates, revises and replaces the Code on Alarms and Indicators 1995.
