This book gives an outline of the grieving process, the kind of reactions which occur when one is bereaved. It also offers suggestions on how to enhance the process and decrease potential suffering. It should be read by those who are int ouch with bereaved people,a s wella s the bereaved themselves.

The loss of a loved one is one of the most painful experiences that most of us will ever have to face in our lives. This book recognises that there is no single solution to the problems of bereavement but that an understanding of grief can help the bereaved to realise that they are not alone in their experience. Long recognised as the most authoritative work of its kind, this new edition has been revised and extended to take into account recent research findings on both sides of the Atlantic. Parkes and Prigerson include additional information about the different circumstances of bereavement including traumatic losses, disasters, and complicated grief, as well as providing details on how social, religious, and cultural influences determine how we grieve. Bereavement provides guidance on preparing for the loss of a loved one, and coping after they have gone. It also discusses how to identify the minority in whom bereavement may lead to impairment of physical and/or mental health and how to ensure they get the help they need. This classic text will continue to be of value to the bereaved themselves, as well as the professionals and friends who seek to help and understand them.

Helps newly bereaved pet owners through the grief, pain, and confusion that follow the death of a pet, explaining each stage of the bereavement process and how to make it less agonizing

The Handbook of Bereavement Research provides a broad view of diverse contemporary approaches to bereavement, examining both normal adaptation and complex manifestations of grief. In this volume, leading interdisciplinary scholars focus on 3 important themes in bereavement research: consequences, coping, and care. In exploring the consequences of bereavement, authors examine developmental factors that influence grief both for the individual and the family at different phases of the life cycle. In exploring coping, they describe new empirical studies about how people can and do cope with grief, without professional intervention. Until recently, intervention for the bereaved has not been scientifically guided and has become the subject of challenging differences of opinion and approach. Chapters in the care section of the volume critically examine interventions to date and provide guidance for assessment and more theoretically and empirically guided treatment strategies. The Handbook provides an up-to-date comprehensive review of scientific knowledge about bereavement in an authoritative yet accessible way that will be essential reading for researchers, practitioners, and health care professionals in the 21st century.
