India Policy Forum is a journal which is jointly promoted by the National Council for Applied Economic Research, New Delhi and the Brookings Institution in Washington D.C., with the objective of presenting high-quality empirical research on the major economic policy issues that confront contemporary India. The papers cover a diverse set of macro and microeconomic topics of relevance to policymakers. The prime objective of this volume is to make the policy discussion accessible to a broad nonspecialist audience within India and abroad. This journal is also expected to assist in the development of a global network of scholars interested in India's economic transformation.

This volume takes an in-depth look at the economic issue of capital flight and outlines strategic methods to address the problem of international tax evasion and bank secrecy. In order to address these issues, the book explores the development prospects of tax evasion governance and identifies obstacles to the efficiency of current tax policies. To overcome the capital flight issue, all lines of attack need to be examined. There is a need to establish responsibility, to set priorities for action that significantly reduces the incentives for capital outflows of this kind, and to seek international consensus. International tax evasion has undermined the credibility of political and administrative systems. This volume lays the foundation for creating an institutional framework that provides transparency of control systems in the face of the guilty roles of tax evasion actors. This requires an effort of economic intelligence that involves mobilizing statistical resources and exploiting them in order to finely identify deviating situations and risk. Key features of the book: • Captures the richness and diversity of tax evasion strategies • Provides an understanding of the prospects of capital flight policies • Identifies stakeholders ' implications in order to provide a global solution to government • Develops a rigorous approach to the problem of tax evasion and the capital flight process Advanced Governing for Capital Flight posits that when combined, the initiatives offered in the volume will be the powerful blow to bank secrecy. Aimed as much at the neophyte as at the insider who questions tax evasion strategies, this book, very ambitious by its specificity, is intended primarily for those who will be called upon to work in the fields of tax evasion and capital flight policies.

With contributions from leading thinkers such as J. Bhagwati and Robert Solow, this edited collection examines some hotly debated issues in today's world. The significance of globalization and its effects on welfare states is discussed and analyzed. A special chapter is devoted to terrorism, and it is explained why some people are willing to sacrifice their lives to gain 'heavenly goods'. The role of multinationals in the globalization process is examined as is the importance of changing and evolving social norms regarding work and leisure for the survival of today's welfare states.

Inclusive Growth in Africa analyzes the concept of inclusion within the challenges facing Africa ' s rapidly growing economies, where rising affluence for some has been accompanied almost everywhere with rising inequality. Using a combination of political economy analyses, sector studies and econometric models, the contributors delve into a range of areas associated to the new realities on the continent. Topics covered include issues of disability, corruption, capital flight, and their implications for economic sustainability. There is also a discussion of the impact on development of dependence on externally determined prices for Africa ' s natural resources. Other sector analyses look at agriculture and wind power, and the innovations required to make a difference for the poorer majority. The book comprises of a rich array of essays on socio-economic inclusion in Africa by authors drawn from academia, African think tanks and international organizations. It would be of interest to scholars and students of many disciplines, including: Economics, Sociology, Development Studies, and African Studies.

The key policy challenge for Turkey in the years ahead will be to enhance and consolidate the advances made since the nation ' s 2000-01 economic crisis. Higher growth could reduce unemployment and raise living standards toward European Union levels. This paper reviews Turkey ' s policy performance in terms of growth, inflation, debt, fiscal and financial sector reform, and labor markets. The analysis assesses the effectiveness of macroeconomic stabilization and structural reforms since the crisis and provides guideposts for future policy.

This book analyses the development challenge faced by Latin America at a time at which the concerns for the large inequality in the region are at a peak. This volume focuses on growth-with-equity, and is written by an outstanding group of Latin American and international researchers and policy-makers.

This paper reviews major issues and developments in the trade area and outlines the challenges governments face as they seek to liberalize trade in the Uruguay Round of trade negotiations and address new trade issues. In industrial countries, the reorientation of policies was most apparent in steps taken to liberalize financial markets and foreign direct investment, privatize public enterprises, and deregulate services, particularly in the transportation and communication sectors. Among developing countries, a growing number recognized the merits of outward, market-oriented policies and took steps to liberalize their trade regimes and open their economies to international competition. By and large, the increased focus on market principles in industrial countries did not carry over to trade and industrial policies or, most notable, to the agricultural sector. Despite strong growth performance in 1983-1989, little progress was made in rolling back the protective barriers that had risen during the preceding recessionary period; protection persists in agriculture and declining sectors and has spread to newer high-tech areas.
