Increased emphasis is placed on geotextiles for retaining walls and soil nailing.

This book provides a comprehensive guide to the design of foundations for tall buildings. After a general review of the characteristics of tall buildings, various foundation options are discussed followed by the general principles of foundation design as applied to tall buildings.

And Considerable attention is paid to the methods of assessment of the geotechnical design parameters, as this is a critical component of the design process. A detailed treatment is then given to foundation design for various conditions, including ultimate stability, serviceability, ground movements, dynamic

The last part of the book deals with pile load testing and foundation performance measurement, and finally, the description of a number of case histories. A feature of the book is the emphasis it places on the various stages of foundation

Should the idea of
economic man—the
amoral and self-
interested Homo
economicus—determine
how we expect people
to respond to monetary
rewards, punishments,
and other incentives?
Samuel Bowles answers
with a resounding “no.”

Policies that follow from this paradigm, he shows, may “crowd out” ethical and generous motives and thus backfire. But incentives per se are not really the culprit. Bowles shows that crowding out occurs when the message conveyed by fines and rewards is that self-interest is expected, that

And the employer thinks the workforce is lazy, or that the citizen cannot otherwise be trusted to contribute to the public good. Using historical and recent case studies as well as behavioral experiments, Bowles shows how well-designed incentives can crowd in the civic motives on which good governance depends.
