Now in its second edition, Electronic Communications Systems provides electronics technologists with an extraordinarily complete, accurate, and timely introduction to all of the state-of-the-art technologies used in the communications field today. Comprehensive coverage includes traditional analog systems, as well as modern digital techniques. Extensive discussion of today's modern wireless systems - including cellular, radio, paging systems, and wireless data networks - is also included. In addition, sections on data communication and the internet, high-definition television, and fiber optics have been updated in this edition to enable readers to keep pace with the latest technological advancements. A block-diagram approach is emphasized throughout the book, with circuits included when helpful to lead readers to an understanding of fundamental principles. This is the eBook of the printed book and may not include any media, website access codes, or print supplements that may come packaged with the bound book. Electronic Communications: A Systems Approach provides a comprehensive overview of wireless and wired, analog and digital electronic communications technologies at the systems level. The authors' carefully crafted narrative structure helps readers put the many facts and concepts encountered in the study of communications technologies into a larger, coherent whole. Topics covered include modulation, communications circuits, transmitters and receivers, digital communications techniques (including digital modulation and demodulation), telephone and wired computer networks, wireless communications systems (both short range and wide area), transmission lines, wave propagation, antennas, waveguides and radar, and fiber-optic systems. The math analysis strikes a middle ground between the

calculus-intensive communications texts intended for four-year BSEE programs and the math-avoidance path followed by some texts intended for two-year programs.

Life now without access to electronic telecommunications would be regarded as highly unsatisfactory by most of the UK population. Such ready access would not have been achieved without methodical and ultimately enforceable means of access to the land on which to install the infrastructure necessary to support the development of an electronic communications network. Successive governments have made such access a priority, regarding it as a principle that no person should unreasonably be denied access to an electronic communications network or electronic communications services. The enactment of the Telecommunications Act 1984 and its revision by the Communications Act in 2003 have played their role in the provision of an extensive electronic infrastructure in the UK, while their reshaping by means of the Digital Economy Act 2017 will continue that process. Throughout that process, a little publicised series of struggles has taken place between telecommunications operators and landowners, as they seek to interpret the Electronic Communications Code by which their rights and obligations have been regulated. This book describes the problems that accompanied the Old Code (which will continue to regulate existing installations and agreements); and the intended solutions under the New Code. The eminent team of authors explain the background, provisions and operation of the old code and the new one, providing practical and jargon-free guidance throughout. It is sure to become the reference on this topic and is intended as a guide for telecommunications operators, land owners, and of course for their advisers in the legal and surveying professions. All members of Falcon Chambers, comprising nine Queen's Counsel and 30 junior barristers, specialise in property law and allied topics, including the various incarnations of the Electronic Communications Code. Members of Falcon Chambers, including all the authors of this new work, have for many years lectured and written widely on the code, and have appeared (acting for both operators and landowners) in many of the few reported cases on the subject of the interface between property law and the code, including for example: *Geo Networks Ltd v The Bridgewater Canal Co. Ltd* (2010); *Geo Networks Ltd v The Bridgewater Canal Co. Ltd* (2011); *Crest Nicholson (Operations) Ltd v Arqiva Services Ltd* (2015); *Brophy v Vodafone Ltd* (2017).
