Previous edition written by: James A. McLoughlin, Rena B. Lewis.

To create truly inclusive school and classroom environments, educators must be prepared to include all students--including students with intellectual disabilities, who are not always given the opportunity to be full participants in the classroom. This book provides an overview of the history of inclusion, the philosophy underlying inclusion, and the role that curriculum accommodations and modifications play in making inclusion possible. The author discusses four ways to modify curriculum for students working well below grade level: altering content, conceptual difficulty, educational goals, or instructional methods. She then provides 40 curriculum modification strategies, based on Robert Marzano's New Taxonomy of Educational Objectives, with directions for implementation and samples of student work.

Many teachers in regular classrooms feel unprepared to teach students with learning disabilities. Fortunately, brain research has confirmed that strategies benefiting learners with special challenges are suited for engaging and stimulating all learners. In this book, neurologist and classroom teacher Judy Willis explains that we can best help students by putting in place strategies, accommodations, and interventions that provide developmentally and academically appropriate challenges to suit the needs, gifts, and goals of each student. Brain-Friendly Strategies for the Inclusion Classroom will help teachers * Understand how the brain learns and the technologies that reveal this process. * Implement strategies that are compatible with students' individual learning styles and honor their multiple intelligences. * Improve the focus of students with attention disorders and help them gain the confidence and skills they need to develop goal-oriented behaviors. * Create an enriching learning environment by incorporating student-centered activities, discovery and hands-on learning experiences, cross-curricular learning, and multisensory lessons. * Implement strategic review, study, and test preparation strategies that will allow students to retain information and connect it with future learning. * Build safe, supportive classroom communities and raise class awareness and empathy for students with learning disabilities. It's time for teachers to lower the barriers, not the bar. Using strategies that align with research on how people's brains function, teachers can engage all students as individuals and help them reach their maximum potential with joy and confidence.

Grade level: 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, e, p, e, i, s, t.

Former teacher Joseph Ciaccio presents a five-stage approach to help revitalize teachers in frustrating classroom situations. Strategies, anecdotes, and tips illustrate how teachers can build partnerships with students and create positive learning experiences for everyone, including themselves.

Do you have a child in your early childhood classroom who: Climbs on top of furniture and jumps off? Covers his ears when children are singing? Refuses to touch clay, paint, or sand? Often falls down and skins his or her knees? Refuses to play on outdoor playground equipment? If so, it is possible this child is having trouble with sensory integration. How can teachers help children with these problems so they can enjoy learning and grow in positive ways? The Sensory Integration Book helps identify children who have difficulties with sensory processing and offers preschool teachers simple, easy-to-use solutions to support the sensory needs of young children in the preschool classroom. Easy-to-implement solutions include adaptations and activities for children with different types of Sensory Processing Disorder. This book has a bonus chapter with instructions on creating low-cost items to help children with sensory issues.

"Clearly written and well organized, this book shows how to apply the principles of universal design for learning (UDL) across all subject areas and grade levels. The editors and contributors describe practical ways to develop classroom goals, assessments, materials, and methods that use UDL to meet the needs of all learners. Specific teaching ideas are presented for reading, writing, science, mathematics, history, and the arts, including detailed examples and troubleshooting tips. Particular attention is given to how UDL can inform effective, innovative uses of technology in the inclusive classroom. Subject Areas/Keywords: assessments, classrooms, content areas, curriculum design, digital media, educational technology, elementary, inclusion, instruction, learning disabilities, literacy, schools, secondary, special education, supports, teaching methods, UDL, universal design Audience: General and special educators in grades K-8, literacy specialists, school psychologists, administrators, teacher educators, and graduate students"--

Offers parents of special needs children information on how best to advocate for their child.

An easy-to-read guide offers an introduction to effective classroom management, including tips on setting up a classroom, establishing routines, and pacing the curriculum.
