Vehicles allegedly affected by this defect are 2011-2019 Hyundai Sonata, 2013-2019 Hyundai Santa Fe and Santa Fe Sport, 2011-2019 Kia Optima and Kia Sportage, and 2012-2019 Kia Sorento or Kia Soul vehicles that were equipped with 2.0-liter or 2.4-liter engines.

This fifth edition of Profile of the International Pump Industry - Market Prospects to 2007 reviews the markets, technological trends, and major manufacturers of industrial pumps. Profile of the International Pump Industry covers both the international pump industry and its associated market, illustrating the structure of the industry, highlighting developments, identifying future trends, and looking at recent mergers and acquisitions. Market estimates and forecasts to 2007, by region and pump type, are presented along with an analysis of the main end-user markets for industrial pumps, and a technology overview. Forty leading international pump manufacturers are profiled and a Top 20 league table of pump manufacturers, ranked by sales of pumps, is given. A directory of pump manufacturing companies and an index of companies by product type are also included.

This book has been created on the basis of contributions to the 54th International Conference of Machine Design Departments that was held for the 60th anniversary of Technical University of Liberec. This international conference which follows a tradition going back more than 50 years is one of the longest-running series of conferences held in central Europe, dealing with methods and applications in machine design. The main aim of the conference was to provide an international forum where experts, researchers, engineers and industrial practitioners, managers and Ph.D. students could meet, share their experiences and present the results of their efforts in the broad field of machine design and related fields. The book has seven chapters which focus on new knowledge of machine design, optimization, tribology, experimental methods and measuring, engineering analyses and product innovation. Authors presented new design methods of machine parts and more complex assemblies with the help of numerical methods such as FEM. Research, measurements and studies of new materials, including composites for energy-efficient constructions are also described. The book also includes solutions and results useful for optimization and innovation of complex design problems in various industries.
