Few issues in the history of the language sciences have been an object of as much discussion and controversy as linguistic categories.

The eleven articles included in this volume tackle the issue of categories from a wide range of

perspectives and with different foci, in the context of the current debate on the nature and methodology of the research on comparative concepts – particularly, the relation between the categories needed to describe languages and those needed to compare languages.

While the first six

papers deal with general theoretical questions, the following five confront specific issues in the domain of language analysis arising from the application of categories. The volume will appeal to a very broad readership: advanced students and scholars in any field of

In this important and

of language variety.
He considers why

are more common than others. The task of trying to explain typological variation among languages has been mainly undertaken by functionally-oriented linguists. Generative grammarians entering the field of typology in the 1980s put forward the idea that cross-linguistic differences

Unfortunately, this way of looking at variation turned out to be much less successful than had been hoped for.

Typology And

Language typology is concerned with the construction of

theoretical

frameworks capable of delimiting the range of human languages and of capturing constraints on cross-linguistic variation.

This text offers accounts of the theoretical
