‘ I know no place where firm and paternal government would sooner produce beneficial results than in the Solomons ... Here is an object worthy indeed the devotion of one ’ s life ’ . Charles Morris Woodford devoted his working life to pursuing this dream, becoming the first British Resident Commissioner in 1897 and remaining in office until 1915, establishing the colonial state almost singlehandedly. His career in the Pacific extended beyond the Solomon Islands. He worked briefly for the Western Pacific High Commission in Fiji, was a temporary consul in Samoa, and travelled as a Government Agent on a small labour vessel returning indentured workers to the Gilbert Islands. As an independent naturalist he made three successful expeditions to the islands, and even climbed Mt Popomanaseu, the highest mountain in Guadalcanal. However, his natural history collection of over 20,000 specimens, held by the British Museum of Natural History, has not been comprehensively examined. The British

Solomon Islands Protectorate was established in order to control the Pacific Labour Trade and to counter possible expansion by French and German colonialists. It remaining an impoverished, largely neglected protectorate in the Western Pacific whose economic importance was large-scale copra production, with its copra considered the second-worst in the world. This book is a study of Woodford, the man, and what drove his desire to establish a colonial protectorate in the Solomon Islands. In doing so, it also addresses ongoing issues: not so much why the independent state broke down, but how imperfectly it was put together in the first place.

Publisher Description

Enfin un outil pour enseigner et évaluer les compétences les élèves de 5e ! Un dispositif clé en main pour simplifier l'enseignement de vos élèves de 5e par compétences et leur évaluation avec... Des doubles pages " Objectif " permettant à vos élèves de réviser et de s'entraîner avec plusieurs parcours sur les connaissances et les capacités à acquérir tout au long de l'année. Des problèmes pour mettre en oeuvre les six compétences mathématiques et vous permettre de faire plusieurs observations dans le but d'évaluer l'acquisition de ces compétences. Des évaluations complémentaires combinant les acquis de plusieurs chapitres pour vous aider à apprécier le travail et les progrès réalisés par vos élèves tout au long de l'année. Des grilles en fin de cahier pour visualiser les progrès de vos élèves et les positionner sur les huit items du socle commun et l'acquisition des capacités et compétences mathématiques. Des vidéos pour accompagner vos élèves en dehors de la classe afin qu'ils puissent continuer à travailler en autonomie, accessible via Bordas Flash Page ou sur le site ressources. L'utilisation des couleurs pour faciliter le repérage dans le cahier. Les pages vertes sont consacrées à la révision des connaissances et capacités. Les pages orange sont " multi-objectifs " : travail sur les compétences avec des problèmes à coups de pouce et une tâche complexe finale. En fin d'ouvrage, des coups de pouce, des problèmes de synthèse (évaluations) et des grilles de positionnement sur les capacités, les compétences et le socle commun.

'Mansoulié here demonstrates his talent for communicating physics to non-scientists, his target audience for this brief, readable, volume.'CHOICEThe book comprises 15 short chapters, each presenting an important equation of Physics, from the simplest and oldest, to more complex and recent ones. The target audience is the interested general public, hence no mathematics is involved (beyond the simple expression of each equation).What can a professional 'read' in an equation? Does one see a rainbow differently when one knows the law of refraction of light? Do some equations tell more than what they were invented for? The book presents an opportunity to think about the nature of the physical laws (without writing a philosophy treatise): are they written in advance, or only the result of our imagination?Memories and personal quotes in the book underline the intimate relation between a scientist and his research, and the interplay with his personal life. Each chapter is illustrated by a full page artistic drawing by Lison Bernet, sometimes kind, sometimes funny, and always poetic.

This special volume of Progress in Molecular Biology and Translational Science provides a current overview of how memory is

processed in the brain. A broad range of topics are presented by leaders in the field, ranging from brain circuitry to synaptic plasticity to the molecular machinery that contributes to the brain's ability to maintain information across time. Memory systems in the prefrontal cortex, hippocampus and amygdala are considered as well. In addition, the volume covers recent contributions to our understanding of memory from in vivo imaging, optogenetic, electrophysiological, biochemical and molecular biological studies. Articles from world renowned experts in memory Covering topics from signaling, epigenetic, RNA translation to plasticity Methodological approaches include molecular and cellular, behavioral, electrophysiological, optogenetic and functional imaging

An imaginary conversation between Isaac Newton, Albert Einstein, and a modern physicist provides insight on the changes from classical physics to the theory of relativity to quantum mechanics

This volume rethinks the work of Jacques Ellul (1912-1994) on the centenary of his birth, by presenting an overview of the current debates based on Ellul's insights. As one of the most significant twentieth-century thinkers about technology, Ellul was among the first thinkers to realize the importance of topics such as globalization, terrorism, communication technologies and ecology, and study them from a technological perspective. The book is divided into three sections. The first discusses Ellul ' s diagnosis of modern society, and addresses the reception of his work on the technological society, the notion of efficiency, the process of symbolization/de-symbolization, and ecology. The second analyzes communicational and cultural problems, as well as threats and trends in early twenty-first century societies. Many of the issues Ellul saw as crucial – such as energy, propaganda, applied life sciences and communication – continue to be so. In fact they have grown exponentially, on a global scale, producing new forms of risk. Essays in the final section examine the duality of reason and revelation. They pursue an understanding of Ellul in terms of the depth of experience and the traditions of human knowledge, which is to say, on the one hand, the experience of the human being as contained in the rationalist, sociological and philosophical traditions. On the other hand there are the transcendent roots of human existence, as well as “ revealed knowledge, ” in the mystical and religious traditions. The meeting of these two traditions enables us to look at Ellul ' s work as a whole, but above all it opens up a space for examining religious life in the technological society.

In the second novel of Maya Rodale ' s enchanting Keeping Up with the Cavendishes series, an American heiress finds her reputation—and heart—in danger when she travels to London and meets a wickedly tempting rake Terribly Improper Lady Amelia is fed up with being a proper lady and wishes to explore London, so one night she escapes . . . and finds herself in the company of one Alistair Finlay-Jones. He ' s been ordered by his uncle to wed one of the American girls. How lucky, then, that one of them stumbles right into his arms! Totally Scandalous Alistair and Amelia have one perfect day to explore London, from Astley ' s Amphitheater to Vauxhall Gardens. Inevitably they end up falling in love and making love. If anyone finds out, she will

be ruined, but he will win everything he ' s ever wanted. Very Romantic When Amelia finds out Alistair has been ordered to marry her, he must woo her and win back the angry American girl. But with the threat of scandals, plural, looming . . . will he ever catch up to the woman he loves?
