Various kinds of mineralization have been found in many biological systems. Investigations made at a microscopical level using various sophisticated analytical methods and using principles developed in different fields have clarified their mechanisms very much. Sometimes, very similar phenomena have been found in the mineralized tissues of completely different biological systems. Compilation and comparative investigations of such findings obtained from the many specimens systematically collected contribute a great deal to an understanding of the crucial mechanisms and significance of biominerali

zation which originated in very primitive organisms and remain in advanced ones. Previously, the functional significance of mineralized tissues was considered mainly from an anatomical point of view based upon their morphological and structural features. However, the recent advance of investigations has made it possible to interpret the functional significance of biomineralization not only from local and mechanical points of view, but also from a systemic and phylogenetic point of view. It is also well-known that biomineralization has contributed in various ways to geological and oceanographical conditions of the environment in which the organisms were living. During this process, the mechanisms of biomineralization may have evolved to maintain harmony between organisms and their environments.

After decades of civil war and instability, the African country of Angola is experiencing a spectacular economic boom thanks to its most valuable natural resource: oil. Focusing on the everyday realities of people living in the extraction zones, Reed explores the exclusion, degradation, and violence that are the fruits of petrocapitalism in Angola.

The emergence of the Biochemical Sciences is underlined by the FAOB symposium in Seoul and highlighted by this Satellite meeting on the "New Bioenergetics." Classical mitochondrial electron transfer and energy coupling is now complemented by the emerging molecular biology of the respiratory chain which is studied hand in hand with the recognition of mitochondrial disease as a major and emerging study in the basic and clinical medical sciences. Thus, this symposium has achieved an important balance of the fundamental and applied aspects of bioenergetics in the modern setting of molecular biology and mitochondrial disease. At the same time, the symposium takes note not only of the emerging excellence of Biochemical Studies in the Orient and indeed in Korea itself, but also retrospectively enjoys the history of electron transport and energy conservation as represented by the triumvirate of Yagi, King and Slater. Many thanks are due Drs. Kim and Ozawa for their elegant organization of this meeting and its juxtaposition to the FAOB Congress. Britton Chance April 2, 1990 v PREFACE This book contains the contributed papers presented at the "International Symposium on Bioenergetics: Molecular Biology, Biochemistry and Pathology", held in Seoul, Korea, August 18-21, 1989, sponsored by International Union of Biochemistry (as ruB Symposium No. 191) and Ewha Womans University, Seoul, Korea. The symposium was held in honor of Professor Kunio Yagi to commemorate his 70th birthday.

Presents alphabetically arranged entries on business topics, including articles on individual countries and businesses, covering processes, responsibilities, ethics, policies, regulations, theories, legislation, management practices, and other related topics. Includes a chronology of business from 4000 BC to AD 2009.

This book provides an overview of the application of Corporate Social Responsibility in businesses and corporations around the world. Primarily based on real cases, it focuses on different approaches to CSR from a global perspective. It provides a critique of the "wrong" practices often employed even by multinational organizations, and highlights the resultant negative effects. On the other hand the book demonstrates good examples that can help multinationals or even entire countries to achieve both a better reputation and increased profitability. "CSR in the Global Business World" is a rich resource of illustrative cases, serving both as a basis for ongoing research as well as for teaching purposes at the business school level.
