The fifth edition of this classic textbook sets out the essential techniques needed for a solid grounding in the surveying. The popular and trusted textbook covers the traditional topics such as levelling, measurement of angles, measuring distances, and how to carry out traversing and compute coordinates, as well as the latest technological advances. It is packed with clear illustrations, exercises and worked examples, making it both a comprehensive study aid for students and a reliable reference tool for practitioners. This text is aimed at students studying surveying as either part of a civil engineering, building or construction course or as a separate discipline. It is also useful for students who undertake surveying as an elective subject and is a useful resource for practising surveyors. New to this Edition: - The latest developments in Global Navigation Satellite Systems (GNSS) particularly the introduction of network RTK and OS Net and their applications - Recent developments in survey instruments, methods and digital technologies including image processing with total stations and laser planners, developments in data processing and integration and updates on Ordnance Survey mapping products

Light Scattering Reviews (vol.7) is aimed at the description of modern advances in radiative transfer and light scattering. The following topics will be considered: the general - purpose discrete - ordinate algorithm DISORT for radiative transfer, fast radiative transfer techniques, use of polarization in remote sensing, Markovian approach for radiative transfer in cloudy atmospheres, coherent and incoherent backscattering by turbid media and surfaces, advances in radiative transfer methods as used for luminiscence tomography, optical properties of aerosol, ice crystals, snow, and oceanic water. This volume will be a valuable addition to already published volumes 1-6 of Light Scattering Reviews.

Monte Albán was the capital of the Valley of Oaxaca, Mexico, ca. 500 B.C.¿A.D. 600, but once its control began to wane, other sites filled the political vacuum. Archaeologists have long awaited a meticulous excavation of one of these sites¿which would help us better understand the process that transformed second-tier sites into a series of polities or señoríos that competed with each other for centuries. This new book reports in detail on Ronald Faulseit's excavations at the site of Dainzú-Macuilxóchitl in the Valley of Oaxaca. His 2007¿2010 mapping and excavation seasons focused on the Late Classic (A.D. 600¿900) and Early Postclassic (A.D. 900¿1300). The spatial distributions of surface artifacts¿collected during the intensive mapping and systematic surface collecting¿on residential terraces at Cerro Danush are analyzed to evaluate evidence for craft production, ritual, and abandonment at the community level. This community analysis is complemented by data from the comprehensive excavation of a residential terrace, which documents diachronic patterns of behavior at the household level. The results from Faulseit¿s survey and excavations are evaluated within the theoretical frameworks of political cycling and resilience theory. Faulseit concludes that resilient social structures may have helped orchestrate reorganization in the dynamic political landscape of Oaxaca after the political collapse of Monte Albán.

This is a very thorough revision of an established textbook first published in 1978 (second edition 1985). While retaining the successful style and basic organisations of the previous editions, the authors have brought this edition up to date with the latest equipment and methods for modern site surveying.

This is a multidisciplinary study of the early contact period of Alaskan Native history that follows a major hunting and fishing Inupiaq group at a time of momentous change in their lifeways. The Amilgaqtau yaagmiut were the most powerful group in the Kobuk River area. But their status was forever transformed thanks to two major factors. They faced a food shortage prompted by the decline in caribou, one of their major foods. This was also the time when European and Asian trade items were first introduced into their traditional society. The first trade items to arrive, a decade ahead of the Europeans themselves, were glass beads and pieces of metal that the Inupiat expertly incorporated into their traditional implements. This book integrates ethnohistoric, bio-anthropological, archaeological, and oral historical analyses.

This text describes topics discussed at the conference, including: tunnelling and construction in soft ground and rocks; geological investigations; tunnelling machines; planning for underground infrastructure; safety issues and

environmental and social aspects of underground development.

The growing market penetration of Internet mapping, satellite imaging and personal navigation has opened up great research and business opportunities to geospatial communities. Multi-platform and multi-sensor integrated mapping technology has clearly established a trend towards fast geospatial data acquisition. Sensors can be mounted on various pla

Cosmology, Calendars, and Horizon-Based Astronomy in Ancient Mesoamerica is an interdisciplinary tour de force that establishes the critical role astronomy played in the religious and civic lives of the ancient peoples of Mesoamerica. Providing extraordinary examples of how Precolumbian peoples merged ideas about the cosmos with those concerning calendar and astronomy, the volume showcases the value of detailed examinations of astronomical data for understanding ancient cultures. The volume is divided into three sections: investigations into Mesoamerican horizon-based astronomy, the cosmological principles expressed in Mesoamerican religious imagery and rituals related to astronomy, and the aspects of Mesoamerican calendars related to archaeoastronomy. It also provides cutting-edge research on diverse topics such as records of calendar and horizon-based astronomical observation (like the Dresden and Borgia codices), iconography of burial assemblages, architectural alignment studies, urban planning, and counting or measuring devices. Contributors—who are among the most respected in their fields— explore new dimensions in Mesoamerican timekeeping and skywatching in the Olmec, Maya, Teotihuacano, Zapotec, and Aztec cultures. It will be of great interest to students and scholars of anthropology, archaeology, art history, and astronomy.
