I would gladly welcome contributions and feedback to this BookStore.NET open-source (GPL v3) project, being interested in particular in a Mono port of this project.

"This project, College Online Bookstore, is a three-tier E-Commerce application. It is designed to facilitate managing and selling textbooks online. An online bookstore benefits students, professors and bookstore managers. Students can search for and buy books as well as post or read book reviews. Professors can enter course and book information. The store manager can add and delete books as well as manage book inventory. Updates include changing a book's edition or price, adding new books and deleting the books no longer sold. The manager can also update order status and view sales reports online. On this project, I did a conceptual design (Database ER Model, usability design for the web interface), a logical design (logical table structure, application architecture), and a physical design (create tables, store procedures). Then I implemented the project with Java server pages and servlets. This project is based on a synthesis of material learned in different courses. Java is the main programming language used in this project."--Author's Abstract.

The necessary information content and recommendations for an organization for Software Design Descriptions (SDDs) are described. An SDD is a representation of a software system that is used as a medium for communicating software design information. This recommended practice is applicable to paper documents, automated databases, design description languages, or other means of description.

In the universally acclaimed and award-winning The Bottom Billion, Paul Collier reveals that fifty failed states--home to the poorest one billion people on Earth--pose the central challenge of the developing world in the twenty-first century. The book shines much-needed light on this group of small nations, largely unnoticed by the industrialized West, that are dropping further and further behind the majority of the world's people, often falling into an absolute decline in living standards. A struggle rages within each of these nations between reformers and corrupt leaders--and the corrupt are winning. Collier analyzes the causes of failure, pointing to a set of traps that ensnare these countries, including civil war, a dependence on the extraction and export of natural resources, and bad governance. Standard solutions do not work, he writes; aid is often ineffective, and globalization can actually make matters worse, driving development to more stable nations. What the bottom billion need, Collier argues, is a bold new plan supported by the Group of Eight industrialized nations. If failed states are ever to be helped, the G8 will have to adopt preferential trade policies, new laws against corruption, new international charters, and even conduct carefully calibrated military interventions. Collier has spent a lifetime working to end global poverty. In The Bottom Billion, he offers real hope for solving one of the great humanitarian crises facing the world today. "Set to become a classic. Crammed with statistical nuggets and common sense, his book should be compulsory reading." --The Economist "If Sachs seems too saintly and Easterly too cynical, then Collier is the authentic old Africa hand: he knows the terrain and has a keen ear.... If you've ever found yourself on one side or the other of those arguments--and who hasn't?--then you simply must read this book." --Niall Ferguson, The New York Times Book Review "Rich in both analysis and recommendations.... Read this book. You will learn much you do not know. It will also change the way you look at the tragedy of persistent poverty in a world of plenty." --Financial Times

This handbook is composed of performance aids to support each activity a novice project manager must perform. In addition, it includes an introduction to project management basics to provide a context for using the tools, and a glossary of terms for reference when using other project management resources, such as project management software.

Do you know how to find the best contractor for your project for the best price? Do you know the type of contractor operation that is best suited for your project? Do you want to know how to get work completed for free? These questions and more are answered. Through my years as a contractor I developed a bid evaluation process. This system simplifies the bidding process and flushes out missing items in the contractors bids which enable you to evaluate those bids apples for apples so you know what you're getting. I know this to be a fact because I used this system in my business for 20 years. In this book I have laid out the process with step by step instructions that will guide you through the whole selection process. You won't believe how much you will save in the buy out process.

A-State Department of Sustainability: Software Applications in Business Project A-State Department of Sustainability is a fictional organization in which the student works as the Executive Assistant. The project consists of 28 workdays (June 1 - July 8) during which students complete the following tasks: Create and update spreadsheets, databases, charts, graphs, an organizational chart and Gantt Chart; write business letters, memos, emails, a slogan, and press release; design a letterhead, brochure, advertisement, flyer, t-shirt, web site and blog; organize a global conference and conduct problem solving. Instructors may assign tutorials for software as needed. Tutorials are not included in the text. All assignments refer to "spreadsheet, database, word processing, ect." so the instructors/students can use their preferred software brands. Examples of how to format letters, memos, emails, and spreadsheets are included. In the optional research and presentation component students research and present topics related to global and domestic sustainability. This textbook has been designed for lower-level and upper-level courses and can be easily adapted for in-class or online use. From the author: I created this textbook while teaching Software Applications in Business because I could not find a suitable text. I have conducted many iterations of refinement during classroom use. Many years of industry experience together with a 15-year State University of New York tenure have enabled me to design a textbook that will meet the needs of instructors who wish to create a realistic experience which builds a skill set that students can confidently take into the workplace. Students have returned after graduation and told me this was a valuable class and they could immediately utilize the skills they developed during the class in their current jobs.
