This reference work breaks new ground as an electronic resource. Utterly comprehensive, it serves as a repository of knowledge in the field as well as a frequently updated conduit of new material long before it finds its way into standard textbooks.

Contains 101 vocabulary instruction, enrichment, and intervention activities in print form, with an additional 300 guided practice activities and independent practice worksheets on the attached CD-ROM.

This indispensable resource offers a cutting-edge framework and practical tools for screening and assessing K-2 students at risk for reading problems. Provided are critical reviews of 42 specific measures, selected for optimal technical quality and presented in a clear, standardized format. Encapsulated are the scientific basis for each instrument; the components of reading acquisition measured; administration, scoring, and interpretation procedures; the instrument's psychometric soundness and usability; linkages to intervention; source; and cost. Detailed case examples drawn from the author's practice help the reader better understand the type of information generated by each measure and demonstrate how results can be written up in a variety of effective report formats.

This study had three purposes: (1) to identify differential item functioning (DIF) on the PPVT-III (Forms A & B) using a partial correlation method, (2) to find a consistent pattern in items identified as underestimating ability in each ethnic minority group, and (3) to compare findings from an expert judgment method and a partial correlation method. Hispanic, African American, and white subjects for the study were provided by American Guidance Service (AGS) from the standardization sample of the PPVT-III; English language learners (ELL) of Mexican descent were recruited from school districts in Central and South Texas. Content raters were all self-selected volunteers, each had advanced degrees, a career in education, and no special expertise of ELL or ethnic minorities. Two groups of teachers participated as judges for this study. The "expert" group was selected because of their special knowledge of ELL students of Mexican descent. The control group was all regular education teachers with limited exposure to ELL. Using the partial correlation method, DIF was detected within each group comparison. In all cases except with the ELL on form A of the PPVT-III, there were no significant differences in numbers of items found to have significant positive correlations versus significant negative correlations. On form A, the ELL group comparison indicated more items with negative correlation than positive correlation [$\chi^2(1) = 5.538$; $[\rho] = .019$]. Among the items flagged as underestimating ability of the ELL group, no consistent trend could be detected. Also, it was found that none of the expert judges could adequately predict those items that would underestimate ability for the ELL group, despite expertise. Discussion includes possible consequences of item placement and

recommendations regarding further research and use of the PPVT-III.
