Physiotherapy is arriving at a critical point in its history. Since World War I, physiotherapy has been one of the largest allied health professions and the established provider of orthodox physical rehabilitation. But ageing populations of increasingly chronically ill people, a growing scepticism towards biomedicine and the changing economy of healthcare threaten physiotherapy’s long-held status. Paradoxically, physiotherapy’s affinity for treating the ‘body-as-machine’ has resulted in an almost complete inability to identify the roots of the profession’s present problems, or define possible ways forward. Physiotherapists need to engage in critically informed theoretical discussion about the profession’s past, present and future - to explore their practice from economic, philosophical, political and sociological perspectives. The End of Physiotherapy aims to explain how physiotherapy has arrived at this critical point in its history, and to point to a new future for the profession. The book draws on critical analyses of the historical and social conditions that have made present-day physiotherapy possible. Nicholls examines some of the key discourses that have had a positive impact on the profession in the past, but now threaten to derail it. This book makes it possible for physiotherapists to think otherwise about their profession and their day-to-day practice. It will be essential reading for scholars and students of physiotherapy, interprofessional and community rehabilitation, as well as appealing to those working in medical sociology, the medical humanities, medical history and health care policy.

This volume reflects on how anthropologists have engaged in medical education and aims to positively influence the future careers of anthropologists who are currently engaged or are considering a career in medical education. The volume is essential for medical educators, administrators, researchers, and practitioners, those interested in the history of medicine, global health, sociology of health and illness, medical and applied anthropology. For over a century, anthropologists have served in many roles in medical education: teaching, curriculum development, administration, research, and planning. Recent changes in medical education focusing on diversity, social determinants of health, and more humanistic patient-centered care have opened the door for more anthropologists in medical schools. The chapter authors describe various ways in which anthropologists have engaged and are currently involved in training physicians, in various countries, as well as potential new directions in this field. They address critical topics such as: the history of anthropology in medical education; humanism, ethics, and the culture of medicine; interprofessional and collaborative clinical care; incorporating patient perspectives in practice; addressing social determinants of health, health disparities, and cultural competence; anthropological roles in planning and implementation of medical education programs; effective strategies for teaching medical students; comparative analysis of systems of care in Japan, Uganda, France, United Kingdom, Mexico, Canada and throughout the United States; and potential new directions for anthropological engagement with medicine. The volume overall emphasizes the important role of anthropology in educating physicians throughout the world to improve patient care and population health. .
