Leading theorists and practitioners trace the evolution of key ideas in urban and regional planning over the last hundred years

Jane Jacobs (1916-2006) is history’s most celebrated urban critic. In addition to her classic, Death and Life of Great American Cities, Jacobs authored another half dozen influential books on urban planning, economics, and design. She was also a tireless advocate of vibrant city neighborhoods. Ideas that Matter: The Worlds of Jane Jacobs offers students, enthusiasts, and critics unprecedented insights into the work of this seminal thinker. Originally published in 1997, and continually sought after ever since, this 2011 edition includes a new introduction by distinguished urban scholar Mary Rowe. The book is a unique combination of Jacobs’ own writing (including previously unpublished speeches, letters, and articles), biography, and analysis by other scholars. Arranged by topic, it sheds light both on the development of Jacobs’ theories and her life. A chapter on Death and Life of American Cities reveals a debate between the author and her publisher about changing the book’s title. A section on Europe includes letters home from Frankfurt, Paris, London, Venice, and other cities that shaped her sensibilities. And a chapter titled “Ideas” offers analysis from ten contributors who examine Jacobs’ thoughts on issues from population growth to urban infill, self-employment to the wealth of nations. What results is a captivating scrapbook, offering a distinctive understanding of Jacobs’ most important ideas.

As global warming advances, regions around the world are engaging in revolutionary sustainability planning - but with social equity as an afterthought. California is at the cutting edge of this movement, not only because its regulations actively reduce greenhouse gas emissions, but also because its pioneering environmental regulation, market innovation, and Left Coast politics show how to blend the “three Es” of sustainability—environment, economy, and equity. Planning Sustainable Cities and Regions is the first book to explain what this grand experiment tells us about the most just path moving forward for cities and regions across the globe. The book offers chapters about neighbourhoods, the economy, and poverty, using stories from practice to help solve puzzles posed by academic research. Based on the most recent demographic and economic trends, it overturns conventional ideas about how to build more livable places and vibrant economies that offer opportunity to all. This thought-provoking book provides a framework to deal with the new inequities created by the movement for more livable - and expensive - cities, so that our best plans for sustainability are promoting more equitable development as well. This book will appeal to students of urban studies, urban planning and sustainability as well as policymakers, planning practitioners, and sustainability advocates around the world.

The first major biography of the irrepressible woman who changed the way we view and live in cities, and whose influence can still be felt in any discussion of urban planning to this day. Eyes on the Street is a revelation of the phenomenal woman who raised three children, wrote seven groundbreaking books, saved neighborhoods, stopped expressways, was arrested twice, and engaged at home and on the streets in thousands of debates—all of which she won. Here is the child who challenged her third-grade teacher; the high school poet; the journalist who honed her writing skills at Iron Age, Architectural Forum, Fortune, and other outlets, while amassing the knowledge she would draw upon to write her most famous book, The Death and Life of Great American Cities. Here, too, is the activist who helped lead an ultimately successful protest against Robert Moses’s proposed expressway through her beloved Greenwich Village; and who, in order to keep her sons out of the Vietnam War, moved to Canada, where she became as well known and admired as she was in the United States.

City and regional planners talk constantly about the things of the world—from highway interchanges and retention ponds to zoning documents and conference rooms—yet most seem to have a poor understanding of the materiality of the world in which they’re immersed. Too often planners treat built forms, weather patterns, plants, animals, or regulatory technologies as passively awaiting commands rather than actively involved in the workings of cities and regions. In the ambitious and provocative Planning Matter, Robert A. Beauregard sets out to offer a new materialist perspective on planning practice that reveals the many ways in which the nonhuman things of the world mediate what planners say and do. Drawing on actor-network theory and science and technology studies, Beauregard lays out a framework that acknowledges the inevitable insufficiency of our representations of reality while also engaging more holistically with the world in all of its diversity—including human and nonhuman actors alike.

As with so many facets of contemporary western life, architecture and space are often experienced and understood as a commodity or product. The premise of this book is to offer alternatives to the practices and values of such westernised space and Architecture (with a capital A), by exploring the participatory and grass-roots practices used in alternative development models in the Global South. This process re-contextualises the spaces, values, and relationships produced by such alternative methods of development and social agency. It asks whether such spatial practices provide concrete realisations of some key concepts of Western spatial theory, questioning whether we might challenge the space and architectures of capitalist development by learning from the places and practices of others. Exploring these themes offers a critical examination of alternative development practices methods in the Global South, re-contextualising them as architectural engagements with socio-political space. The comparison of such interdisciplinary contexts and discourses reveals the political, social, and economic resonances inherent between these previously unconnected spatial protagonists. The interdependence of spatial issues of choice, value, and identity are revealed through a comparative study of the discourses of Henri Lefebvre, John Turner, Doreen Massey, and Nabeel Hamdi. These key protagonists offer a critical framework of discourses from which further connections to socio-spatial discourses and concepts are made, including post-marxist theory, orientalism, post-structural pluralism, development anthropology, post-colonial theory, hybridity, difference and subalterneity. By looking to the spaces and practices of alternative development in the Global South this book offers a critical reflection upon the working practices of Westernised architecture and other spatial and political practices. In exploring the methodologies, implications and values of such participatory development practices this book ultimately seeks to articulate the positive potential and political of learning from the difference, multiplicity, and otherness of development practice in order to re-imagine architecture and space. .

Offering ideas for different ways to teach PSHE, this is a go-to resource for the busy teacher looking for creative and engaging techniques. It provides tips, case studies and strategies on planning and pitching sessions as well as weaving PSHE into other aspects of the curriculum. The practical advice includes tips for what works with pupils, ideas for group games, ways to make discussions more engaging and proven techniques for creating inspiring sessions. The book explores a range of complex PSHE topics such as social media, sex and sexuality, mental health and British values. This tried-and-tested guidance will help to give teachers the confidence to create accessible and dynamic skills-based sessions which can make a real difference to pupils.

Successful web design teams depend on clear communication between developers and their clients—and among members of the development team. Wireframes, site maps, flow charts, and other design diagrams establish a common language so designers and project teams can capture ideas, track progress, and keep their stakeholders informed. In this all new edition of Communicating Design, author and information architect Dan Brown defines and describes each deliverable, then offers practical advice for creating the documents and using them in the context of teamwork and presentations, independent of methodology. Whatever processes, tools, or approaches you use, this book will help you improve the creation and presentation of your wireframes, site maps, flow charts, and other deliverables. The book now features: An improved structure comprising two main sections: Design Diagrams and Design Deliverables. The first focuses on the nuts and bolts of design documentation and the second explains how to pull it all together. New deliverable: design briefs, as well as updated advice on wireframes, flow charts, and concept models. More illustrations, to help designers understand the subtle variations and approaches to creating design diagrams. Reader exercises, for those lonely nights when all you really want to do is practice creating wireframes, or for use in workshops and classes. Contributions from industry leaders: Tamara Adlin, Stephen Anderson, Dana Chisnell, Nathan Curtis, Chris Fahey, James Melzer, Steve Mulder, Donna Spencer, and Russ Unger. “As an educator, I have looked to Communicating Design both as a formal textbook and an informal guide for its design systems that ultimately make our ideas possible and the complex clear.” —Liz Danzico, from the Foreword

Asia is a crucial battleground for power and influence in the international system. It is also a theater of new experiments in regional cooperation that could redefine global order. Whose Ideas Matter? is the first book to explore the diffusion of ideas and norms in the international system from the perspective of local actors, with Asian regional institutions as its main focus. There’s no Asian equivalent of the EU or of NATO. Why has Asia, and in particular Southeast Asia, avoided such multilateral institutions? Most accounts focus on U.S. interests and perceptions or intraregional rivalries to explain the design and effectiveness of regional institutions in Asia such as SEATO, ASEAN, and the ASEAN Regional Forum. Amitav Acharya instead foregrounds the ideas of Asian policymakers, including their response to the global norms of sovereignty and nonintervention. Asian regional institutions are shaped by contestations and compromises involving emerging global norms and the preexisting beliefs and practices of local actors. Acharya terms this perspective “constitutive localization” and argues that international politics is not all about Western ideas and norms forcing their way into non-Western societies while the latter remain passive recipients. Rather, ideas are conditioned and accepted by local agents who shape the diffusion of ideas and norms in the international system. Acharya sketches a normative trajectory of Asian regionalism that constitutes an important contribution to the global sovereignty regime and explains a remarkable continuity in the design and functions of Asian regional institutions.

Use this updated resource to prepare for your journey into teaching This newly revised and updated 2nd edition of The First Years Matter provides key actions steps and a flexible twelve-month curriculum - including July for reflection and planning - to help you proactively prepare for your first few years in the classroom. Maximize your effectiveness in the classroom as you: Apply mentoring lessons to differentiate instruction Integrate student voice Prepare for teacher observations and standardized testing Gather evidence to document your progress This updated version includes a robust companion website featuring videos, downloadable forms, and a journal for reflection. Use with Mentoring in Action, the companion guide for mentors!
