Between science and Christianity is to view them as entirely separate endeavors, with different purposes, methods, and bodies of knowledge. This view emphasizes that science is a system of knowledge about the world and its behavior, whereas religion is about morality, God, and the afterlife. Thus, Christianity and science cannot conflict, because they are addressing different sorts of questions. 3

The science vs Christian conflict is over. In an increasingly global and secular scientific culture, the cutting edge of Christian engagement is the conversation with science. In fact, the progress or decline of Christian faith in the 21st century depends largely on its dialogue with science. For Christians, the current cultural skirmishes might seem to be about the best expressions of human sexuality, freedom of speech, or the rights of Christian schools to hire and

“ A superbly argued book. ”  
—Richard Dawkins, author of *The God Delusion* The New York Times bestselling author of *Why Evolution is True* explains why any attempt to make religion compatible with science is doomed to fail In this provocative book, evolutionary biologist Jerry A. Coyne lays out in clear, dispassionate detail why the toolkit of science, based on reason and empirical study, is reliable, while that of religion—including faith, dogma, and revelation—leads to incorrect, untestable, or conflicting conclusions. Coyne is responding to a national climate in which more than half of Americans don ’ t believe in evolution, members of Congress deny global warming, and long-conquered

Childhood diseases are reappearing because of religious objections to inoculation, and he warns that religious prejudices in politics, education, medicine, and social policy are on the rise. Extending the bestselling works of Richard Dawkins, Daniel Dennett, and Christopher Hitchens, he demolishes the claims of religion to provide verifiable “ truth ” by subjecting those claims to the same tests we use to establish truth in science. Coyne irrefutably demonstrates the grave harm—to individuals and to our planet—in mistaking faith for fact in making the most important decisions about the world we live in. Praise for Faith Versus Fact: “ A profound and lovely book . . . showing that the honest doubts of science are better . . . than the false certainties of religion. ”

—Sam Harris, author of *The End of Faith*

For more than 30 years, historians have rejected what they call the ‘warfare thesis’ – the idea that there is an inevitable conflict between religion and science – insisting that scientists and believers can live in harmony. This book disagrees. Taking as its starting point the most famous of all such conflicts, the Galileo affair, it argues that religious and scientific communities exhibit very different attitudes to knowledge. Scripturally based religions not only claim a source of knowledge distinct from human reason. They are also bound by tradition, insist upon the certainty of their beliefs, and are resistant to radical criticism in ways in which the

Sciences are not. If traditionally minded believers perceive a clash between what their faith tells them and the findings of modern science, they may well do what the Church authorities did in Galileo ' s time. They may attempt to close down the science, insisting that the authority of God ' s word trumps that of any ' merely human ' knowledge. Those of us who value science must take care to ensure this does not happen.

the 21st century. It does so by considering the influences of mass media in relation to decision-making research and the Elaboration Likelihood Model, one of the most authoritative persuasion theories. The book 's analysis concentrates on the expression of cues, or cognitive mental shortcuts, in Darwin-sceptic and counter-creationist broadcasts. A multiyear collection of media generated by the most prominent Darwin-sceptic organizations is surveyed, along with rival publications from supporters of evolutionary theory described as the pro-evolutionists. The analysed materials include works produced by Young Earth Creationist and Intelligent Design media makers, New Atheist pacesetters, as well as both agnostic and religious supporters of

evolution. These cues are shown to function as subtle but effective means of shaping public opinion, including appeals to expertise, claims that ideas are being censored, and the tactical use of statistics and technical jargon. Contending that persuasive mass media is a decisive component of science-religion controversies, this book will be of keen interest to scholars of Religion, Science and Religion interactions, as well as researchers of Media and Communication Studies more generally.

notion of perennial conflict or warfare between the two—is part of our modern self-understanding. As the story goes, John William Draper (1811–1882) and Andrew Dickson White (1832–1918) constructed dramatic narratives in the nineteenth century that cast religion as the relentless enemy of scientific progress. And yet, despite its resilience in popular culture, historians today have largely debunked the conflict thesis. Unravelling its origins, James Ungureanu argues that Draper and White actually hoped their narratives would preserve religious belief. For them, science was ultimately a scapegoat for a much larger and more important argument dating back to the Protestant Reformation, where one theological tradition was

**Opposed** against another—a more progressive, liberal, and diffusive Christianity against a more traditional, conservative, and orthodox Christianity. By the mid-nineteenth century, narratives of conflict between “ science and religion ” were largely deployed between contending theological schools of thought. However, these narratives were later appropriated by secularists, freethinkers, and atheists as weapons against all religion. By revisiting its origins, development, and popularization, Ungureanu ultimately reveals that the “ conflict thesis ” was just one of the many unintended consequences of the Protestant Reformation.
