A trusted classic on the key methods in population sampling-now in a modernized and expanded new edition Sampling of Populations, Fourth Edition continues to serve as an all-inclusive resource on the basic and most current practices in population sampling. Maintaining the clear and accessible style of the previous edition, this book outlines the essential statistical methods for survey design and analysis, while also exploring techniques that have developed over the past decade. The Fourth Edition successfully guides the reader through the basic concepts and procedures that accompany real-world sample surveys, such as sampling designs, problems of missing data, statistical analysis of multistage sampling data, and nonresponse and poststratification adjustment procedures. Rather than employ a

heavily mathematical approach, the authors present illustrative examples that demonstrate the rationale behind common steps in the sampling process, from creating effective surveys to analyzing collected data. Along with established methods, modern topics are treated through the book's new features, which include: A new chapter on telephone sampling, with coverage of declining response rates, the creation of "do not call" lists, and the growing use of cellular phones A new chapter on sample weighting that focuses on adjustments to weight for nonresponse, frame deficiencies, and the effects of estimator instability An updated discussion of sample survey data analysis that includes analytic procedures for estimation and hypothesis testing A new section on Chromy's widely used method of taking probability proportional to size samples with minimum replacement of primary sampling units An expanded index with references on the latest research in the field All of the book's examples and exercises can be easily worked out using various software packages including SAS, STATA, and SUDAAN, and an extensive FTP site contains additional data sets. With its comprehensive presentation and wealth of relevant examples, *Sampling of Populations, Fourth Edition* is an ideal book for courses on survey sampling at the upper-undergraduate and graduate levels. It is also a valuable reference for practicing statisticians who would like to refresh their knowledge of sampling techniques.

This book is an all-inclusive resource on the basic and most current practices in population sampling. Find the essential statistical methods for survey design and analysis, while also exploring techniques that have developed over the past decade. Understand the basic concepts and procedures that accompany real-world sample surveys, such as sampling designs, problems of missing data, statistical analysis of multistage sampling data, and nonresponse and poststratification adjustment procedures through illustrative examples that demonstrate the rationale behind common steps in the sampling process.

A unique, accessible guide to current practices in population sampling. Now in its third edition, this popular sampling text continues to provide a highly readable, practical treatment of the subject. Keeping the mathematics to a minimum, it walks the reader through real-world sample surveys—from sampling designs to problems of missing data and nonresponse to estimation procedures. This expanded and updated edition reflects the many developments in the field since the publication of the Second Edition, including the latest methods of multistage sampling, analysis of sample survey data, and software manipulation. *Sampling of Populations, Third Edition* offers:

- \* A wealth of examples illustrating key statistical issues with data sets available for downloading over the Internet.
- \* An emphasis on the most widely used sampling designs today, including completely revised chapters on cluster sampling designs.
- \* A new chapter devoted to telephone sampling and interviewing techniques—contributed by Robert Casady and James M. Lepkowski, who have made many important contributions in the area of telephone surveys.
- \* Illustrative examples detailing how statistical analysis can be performed by means of software now available for use on personal computers and designed specifically for analysis of sample survey data.
- \* Many new and updated practice exercises.

What is the unemployment rate? How many adults have high blood pressure? What is the total area of land planted with soybeans? *Sampling: Design and Analysis* tells you how to design and analyze surveys to answer these and other questions. This authoritative text, used as a standard reference by numerous survey organizations, teaches sampling using real data sets from social sciences, public opinion research, medicine, public health, economics, agriculture, ecology, and other fields. The book is accessible to students from a wide range of statistical backgrounds. By appropriate choice of sections, it can be used for a graduate class for statistics students or for a class with students from business, sociology, psychology, or biology. Readers should be familiar with concepts from an introductory statistics class including linear regression; optional sections contain the statistical theory, for readers who have studied mathematical statistics. Distinctive features include: More than 450 exercises. In each chapter, *Introductory Exercises* develop skills, *Working with Data Exercises* give practice with data from surveys, *Working with Theory Exercises* allow students to investigate statistical properties of estimators, and *Projects and Activities Exercises* integrate concepts. A solutions manual is available. An emphasis on survey design. Coverage of simple random, stratified, and cluster sampling; ratio estimation; constructing survey weights; jackknife and bootstrap; nonresponse; chi-squared tests and regression analysis. Graphing data from surveys. Computer code using SAS® software. Online supplements containing data sets, computer programs, and additional material. Sharon Lohr, the author of *Measuring Crime: Behind the Statistics*, has published widely about survey sampling and statistical methods for education, public policy, law, and crime. She has been recognized as Fellow of the American Statistical Association, elected member of the International Statistical Institute, and recipient of the Gertrude M. Cox Statistics Award and the Deming Lecturer Award. Formerly Dean's Distinguished Professor of Statistics at Arizona State University and a Vice President at Westat, she is now a freelance statistical consultant and writer. Visit her website at [www.sharonlohr.com](http://www.sharonlohr.com). This edition is a reprint of the second edition published by Cengage Learning, Inc. Reprinted with permission.

Available in the PBS UpGrade Study Pack, the manual explanations of crucial concepts in each section of PBS, plus detailed solutions to key problems and step-through models of important techniques.

This book teaches statistics with a modern, data-analytic approach that uses graphing calculators and statistical software. It allows more emphasis to be put on statistical concepts and data analysis than on following recipes for calculations. This gives readers a more realistic understanding of both the theoretical and practical applications of statistics, giving them the ability to master the subject.

The manual provides step-by-step solutions to selected text exercises along with summaries of the key concepts needed to solve the problems.
