Both Ruth and Martin Silberberg returned to Washington University as instructors in Pathology in 1944. They often collaborated on research until Martin Silberberg's death in 1966. Their research interests concerned skeletal growth and aging, hormonal and nutritional factors and the pathogenesis of osteoarthritis; they also researched the role of age in carcinogenesis and in leukomogenesis.

All pages are intact, and the cover is intact. Pages can include considerable notes-in pen or highlighter-but the notes cannot obscure the text. At ThriftBooks, our motto is: Read More, Spend Less.Dust jacket quality is ...

Chemistry: The Molecular Nature of Matter and Change by Martin Silberberg has become a favorite among faculty and students. Silberberg's 4th edition contains features that make it the most comprehensive and relevant text for any student enrolled in General Chemistry. The text contains unprecedented macroscopic to microscopic molecular illustrations, consistent step-by-step worked exercises in every chapter, an extensive range of end-of-chapter problems which provide engaging applications covering a wide variety of freshman interests, including engineering, medicine, materials, and environmental studies. All of these qualities make Chemistry: The Molecular Nature of Matter and Change the centerpiece for any General Chemistry course.

Silberberg's Principles of General Chemistry offers students the same authoritative topic coverage as its parent text, Chemistry: The Molecular Nature of Matter and Change. The Principles text allows for succinct coverage of content with minimal emphasis on pedagogic learning aids. This more streamlined approach to learning appeals to today's efficiency-minded, value-conscious instructors and students without sacrificing depth, clarity, or rigor.

In recent decades, developments in research technologies and therapeutic advances have generated immense public recognition for neuroscience. However, its origins as a field, often linked to partnerships and projects at various brain-focused research centres in the United States during the 1960s, can be traced much further back in time. In *A New Field in Mind* Frank Stahnisch documents and analyzes the antecedents of the modern neurosciences as an interdisciplinary field. Although postwar American research centres, such as Francis O. Schmitt's Neuroscience Research Program at MIT, brought the modern field to prominence, Stahnisch reveals the pioneering collaborations in the early brain sciences at centres in Germany, Austria, and Switzerland in the first half of the twentieth century. One of these, Heinrich Obersteiner's institute in Vienna, began its work in the 1880s. Through case studies and collective biographies, Stahnisch investigates the evolving relationships between disciplines — anatomy, neurology, psychiatry, physiology, serology, and neurosurgery — which created new epistemological and social contexts for brain research. He also shows how changing political conditions in Central Europe affected the development of the neurosciences, ultimately leading to the expulsion of many physicians and researchers under the Nazi regime and their migration to North America. An in-depth and innovative study, *A New Field in Mind* tracks the emergence and evolution of neuroscientific research from the late nineteenth century to the postwar period.
