By Anthony H. Cordesman. September 18, 2019. The history of warfare has never been filled with good predictions of how warfare would evolve in the future. Aside from the odd science fiction writer, no one predicted the technical, tactical, and strategic nature of World War I. World War II began with gross exaggerations of the threat posed by poison gas and the air forces of the day.

This book focuses on the changing nature and methods of warfare with particular emphasis on land warfare. Topics include the impact of factors related to the conduct of war, such as generalship, tactics and strategy, quality of soldiers, weaponry; the impact of technological change, from communication to industrialization; and the relationship between state, society and warfare.

This text looks at the changing nature and methods of warfare, in particular land warfare. Themes explored include the conduct of war from the late 18th century to 1945, the role of technology and the changing role of women in warfare.

This paper challenges the prevailing sentiment regarding the nature of war. Designed to generate discussion on topics where little or none has been acceptable, it pushes the envelope of traditional political and military science thinking. It argues that the nature of war has changed at a fundamental level-that of definition. Further, information technology is so pervasive and interpenetrating that its impact cannot be relegated to mere alteration in the techniques by which war is prosecuted. Rather, information technology facilitates new social structures, exacerbates competing hierarchical beliefs, and, combined with other factors, enhances the ability of powerful nations, or other philosophical organizations, to impose their will on adversaries.
