Introduction to the Chinese Banking System

Reform of the banking sector is the key to China's ability to sustain success in economic transformation. Reform initiatives among the Big Four such as re-capitalization through China's foreign exchange reserves and the creation of asset-management entities to remove a sizeable amount (US \$170 billion) of bad assets have had some success.

China met the West. ? Transformation of China's Modern Banking System is a winner of the Second Financial Book Awards, the Golden Goat Awards, co-organized by China Finance, China (Guangzhou) International Finance Expo, and the Finance Affairs Office of Guangzhou.

In this timely and provocative book, James Stent, a banker with decades of experience in Asian banking and fluency in Chinese language, explains how Chinese banks work, analyzes their strengths and weaknesses, and sets forth the challenges they face in a slowing economy. Without minimizing the real issues Chinese banks face, China's Banking Transformation challenges negative media accounts and reports of "China bears". Based on his 13 years of service on the boards of China Minsheng Bank, a privately

owned listed bank, and China Everbright Bank, a state-controlled listed bank, the author brings the informed view of an insider to the reality of Chinese banking. China's Banking Transformation demonstrates that Chinese banks have transformed into modern, well-run commercial banks, playing a vital role supporting China's extraordinary economic growth. Acknowledging that China's banks are different from Western banks, the author explains that they are hybrid banks, borrowing extensively from Western models, but at the same time operating within a traditional Chinese cultural framework and in line with China's governance model. From his personal experience working at board level, Stent describes the governance and management of China's banks, including the role of the Communist Party. He sees China's banks as embedded in ancient concepts of how government and society work in China,

and also as actors within a market socialist political economy. The Chinese banking system today bears similarities with banking in Northeast Asian "developmental states" of recent past, and also pre-1949 Chinese banking. As the first account of Chinese banking by a Westerner who has worked in China's banks, China's Banking Transformation should be read by anyone interested in the political economy of contemporary China, in Asian development issues, and in banking issues generally. The book dispels misconceptions and provides insight into the financial aspects of China's economic growth story.

The transformation of China's economy has involved major changes

in the financial sector. This book offers a detailed and authoritative guide to financial reform in China since 1979. Bank loans replaced budgetary grants as the most important source of funds for investment. A two-tier financial structure, consisting of a central bank and a newly created specialised commercial bank, developed. Nonbank financial institutions also mushroomed. The book outlines the process of change, compares these changes to the earlier mono-banking system, and shows the problems which remained - including the lack of a proper financial control mechanism. There is a detailed case-study of the Shanghai financial markets.

" The book is a problem-oriented study of China's financial sector in the transitional process since 1979. It provides deep and precise insights into the characteristics and problems of China's financial

sector with respect to investment finance, the central banking and commercial banking systems, the financial market, and the legal and institutional framework of bank supervision in China. More importantly, the book has also proposed workable strategies for resolving two acute problems: interest rate liberalization and solving the issue of non-performing loans in China's banking system. The recent financial crisis in Asia is also a subject of the book, especially as regards its effects on the banking sector, stock markets, and external financial market liberalization in China. Furthermore, a projection is made about the trends in Chinese economic policies, particularly the interest rate policy, the exchange rate policy, and the fiscal policy, and about the perspectives of China's financial sector reform. This book is a valuable reference for academic researchers, investors, business managers, and policy-

makers who are concerned with China's banking and financial system. "

Provides a review of China's financial system and compares it to other financial systems. It reviews what has worked and what has not within the markets and intermediaries in China, the effects of the recent development of China's financial system on the economy, and a non-standard financial sector operating beyond the markets and banking sectors.

Inhaltsangabe:Abstract: Generally speaking, economic growth is closely related to the efficiency of a country's financial markets. That is, the more varied the investment alternatives by which economic resources can flow within a country and between

countries, the more efficient the financial market. This efficiency leads to a higher level of capital formation, and improved capital utilisation, thereby increasing the utility of both savers and borrowers and promoting economic growth. In line with its transition to a market economy China has, amongst other reforms, embarked on a reform of its financial system, transforming its one-bank monopoly into an integrated system of many banks and other specialised financial institutions. The resulting market complexity and the emergence of domestic and international competition gave rise to the marketing of financial services in China. Despite banks increasing marketing sophistication and higher spending on marketing, consumer behaviour is only beginning to react to it. On one hand the emergence of a wide variety of financial institutions and financial products has offset the impact of the social system

reform on individuals lives. On the other hand, most Chinese still stay with one of the four wholly state-owned commercial banks, perhaps out of habit, perhaps from a feeling of security with their old banks. The effect on banks has been dramatic, service levels have improved greatly while product quality and variety have become better. However, the lack of market segmentation, partly due to government regulation, limits banks abilities to effectively target consumer groups, (which also hinders consumers information gathering and decision-making). Transformation of banking is hindered by China s poorly performing corporate sector, which strongly undermines banking profitability. China remains one of the weakest countries in terms of strength of the financial sector (Moody s), and the imminent WTO entry might result in disarray in the financial industry. Foreign banks with their sophisticated

marketing have already put strong pressure on their Chinese counterparts, who are learning quickly. In the long run, the WTO entry and increased openness of the financial market will increase the competitiveness of the marketplace and enhance the development of the marketing of financial services in China. This dissertation will be divided into two parts. In the first part I will be talking about China s [...]

China's banking system has been gradually transformed from a centralized, government-owned and government-controlled provider of loans into an increasingly competitive market in which different types of banks, including several U.S. banks, strive to provide a variety of financial services. Only three banks in China remain fully government-owned; most banks have been transformed

into mixed ownership entities in which the central or local government may or may not be a major equity holder in the bank.

The Chinese Economic Transformation, the 19th volume in the China Update book series, provides an opportunity for young economists to share their views on various issues relating to the Chinese economic transformation. More than half of the contributors to this book are female scholars. Some of the contributors are rising stars in the studies of the Chinese economy and economic transition, and some only recently received their PhDs and are on their way to establishing themselves in the field of China studies. But they have one thing in common: to passionately observe, study and research what is going on in the Chinese economic transformation during the reform period; and, by so
